

All Season Lawn Care

Early Spring

March - April

(apply grass seed when the forsythia blooms)

Lime or Mag-i-cal

These products help bring your lawn down from an acidic state. A soil pH test can help you determine your needs. Moss growing on our lawn is another indicator of acidic soil.

Grub Control

For grub control apply Milky Spore or Season Long Grub Control by Bayer.

Fertilizer

Scotts Lawn Pro Step 1 or Jonathan Green Step 1 help prevent crabgrass and also feeds the lawn. If you plan on seeding in the next 4 months you need to use a "for seeding" version of these products.

Organic Alternative

Apply Jonathan Green Organic Weed Control for your fertilizer (you cannot seed for 2-3 months after applying) and use Milky Spore for your grub control.

Late Spring

April - June

4-6 weeks after the first application.

Weed and Feed

For broad leaf weed control, use Scotts Lawn Pro Weed Control Step 2 or Jonathan Green Weed & Feed Step 2.

Organic Alternative

Apply Jonathan Green Organic Lawn Fertilizer.

Summer

June-August

4-6 weeks after the second application

Fertilizer and Insect Control

Apply Scotts Lawn Pro Insect Control Step 3 or Jonathan Green Summer Survival Step 3.

Organic Alternative

Apply Jonathan Green Organic Weed Control to control the weeds before they come up. Do not reseed for 2-3 months.

Apply your second application of Milky Spore.

Fall

August - November

4-6 weeks after your third application.

Fertilizer

Apply Scotts Lawn Pro Lawn Fertilizer Step 4 or Jonathan Green Winter Survival Step 4.

Grub Control

Apply your third application of Milky Spore or your second application of Season Long Grub Control by Bayer.

Lime or Mag-i-cal

The fall is the time for your second application or Lime or Mag-i-cal by Jonathan Green.

Organic Alternative

Apply Jonathan Green Organic Lawn Fertilizer and use Milky Spore for your grub control.
